- will be added to the list of third-party exporters, not sure how that's going to be implemented in blender. If you're doing work outside of blender, do you know if anyone has put together an exporter for vray? Another option would be to use voxel sculpt to do the same effect, which is a plug-in for 3ds max. It's very powerful, but it's a standalone, not Blender-native plug-in. 3) Use a second blender object as a mask. You can apply a second mask to each object, invert the mask, or use it as "extra" geometry to deform." (3) In the search box, search for "vray" and "mask". (4) If you've never heard of the 'Base Color' option, it's a setting to be found in the Textures panel. It controls the ambient/background color of your scene. (5) "Option 6 - Use a second blender object as a mask. You can apply a second mask to each object, invert the mask, or use it as Procedure: 1) Download VRAY (no plug-ins required). Follow the instructions on the VRAY page to install. 2) Start Blender. Click File -> New. Open the "Import" panel. Click "Add Importer" 3) Select "VRay". Click "OK". 4) "Now you need to enter the location of the vray executable, which can be found in the installer file. Enter this into the box below." 5) Click the "Add" button. 6) "There are two options for putting objects into VRay. The first is to 'Split' the object. This means that the object 82157476af
